GABRIELA OLIVERA

Data Analyst · Operations & Supply Chain Background

Mount Maunganui, Bay of Plenty · gabriela.olivera.nz@gmail.com
gabrielaolivera.nz · linkedin.com/in/gabriela-olivera-nz · github.com/gabrielaoliveranz

SUMMARY

Data analyst with fourteen years in operations and procurement across horticulture, food manufacturing and logistics. I have managed 150+ perishable suppliers and delivered 15–20% cost reductions, and I know where operational numbers break before they reach a report. I now run an independent data analytics practice, building the analysis end to end for small business clients: collecting and cleaning the data, modelling it, and turning it into dashboards people actually use. Three independent portfolio projects, all live and open-source, apply that background to Bay of Plenty kiwifruit and New Zealand's school network, built on real government data, with the limitations written down rather than hidden.

SKILLS

Analysis & reporting: SQL, statistical analysis, scoring and scenario models, forecasting, KPI tracking, reporting to senior management

Tools: Excel, Power BI, SQL, Python (pandas, geopandas), Streamlit, SQLite

Data engineering: Data pipelines, database and star-schema design, API integration, data-quality validation

Ways of working: Git and GitHub, automated testing, continuous integration, accessible design (WCAG AA), clear technical writing

Domain: Supply chain and logistics, procurement, operational risk, perishable goods and primary-industry operations

Languages: Spanish (native), English (professional)

INDEPENDENT ANALYTICS PROJECTS

All three projects were built with AI coding assistance (Claude Code). The questions, the data sources and the modelling decisions are mine, as was the decision to audit the finished work, which surfaced faults in my own analysis that I published as stated limitations rather than leave standing. Full development history is public on GitHub.

CATCHMENT: Where will Bay of Plenty's school rolls feel the most capacity pressure? Oct 2026 · maintained

gabrielaolivera.nz/catchment/dashboard.html · github.com/gabrielaoliveranz/catchment

- Built a SQL Server star schema from NZ Ministry of Education roll data for 189 Bay of Plenty schools, 2010–2025, with six window-function analyses: year-on-year change, composition by territorial authority, growth and decline, capacity pressure and cohort progression.
- Audited my own output before publishing it, caught a double-counting fault in the ethnicity breakdown, and published the fix and the capacity proxy's limitations as a stated methodology note.

TERROIR: Where could kiwifruit growing expand in Bay of Plenty? Aug 2026 · maintained

terroir.streamlit.app · github.com/gabrielaoliveranz/horticultural-land-suitability-nz

- Answered a real regional question with real data: scored 16,072 of 22,834 rural land parcels across four districts for kiwifruit suitability, identifying 9,557 with good soil and no current orchard or vineyard use, using a Python pipeline drawing on four live New Zealand government sources (LINZ, S-map, LCDB, Open-Meteo).
- Designed the scoring model itself, weighting four soil properties against published NZ kiwifruit agronomic research, and found and fixed two data faults along the way, including a text-encoding mismatch that silently dropped an entire district from the analysis.
- Delivered a six-page interactive dashboard and written case study for non-technical readers, with automated tests on every change so the pipeline is safe to re-run unattended.

APOPHENIA: Should this kiwifruit shipment go today, or wait? May – Jun 2026 · maintained

apophenia-nz.vercel.app · github.com/gabrielaoliveranz/optimising-kiwifruit-export

- Built an interactive decision tool for a kiwifruit export season: nine operational variables (weather, port congestion, fruit quality, regulatory load) recalculate risk, cost of delay and a 26-week outlook live, returning a plain-language recommendation.
- Designed the underlying database as a star schema from a synthetic dataset of 445 growers across four seasons, analysed in SQL alongside a Power BI dashboard, and validated the risk model with logistic regression (McFadden pseudo-R^2 0.70).
- Connected four live public data feeds (weather, currency rates, road geometry, mapping), each guarded independently so one outage never breaks the rest.

EXPERIENCE

Founder & Independent Data Analyst Sep 2026 – Present

Gabriela Olivera · Data Analytics (gabrielaolivera.nz) · Mount Maunganui, NZ · Remote/Hybrid

– Deliver freelance data analysis for small and medium businesses, end to end: data cleaning and consolidation (Xero, spreadsheets, point-of-sale exports), Excel and Power BI dashboards, and plain-language written summaries for non-technical stakeholders.

– Run the practice through gabrielaolivera.nz: service scoping, fixed-price quoting, client onboarding and data-privacy agreements.

Quality Control & Operations: Regulated Primary Industries Mar 2019 – Sep 2025

Contract and temporary roles · Bay of Plenty and Marlborough, New Zealand

– Worked across wine production, food manufacturing, kiwifruit post-harvest, logistics and laboratory environments (Pernod Ricard as cellar hand, MPAC in box making and quality control, EastPack in forklift operations, AssureQuality, Jenkins Freshpac, Tegel and Vardaan Enterprises), building first-hand knowledge of how New Zealand primary-industry supply chains actually run.

– Carried out quality control against grade and compliance standards at production pace, in audited environments where traceability and record accuracy matter: the same operational measurements that drive all three portfolio projects, operating forklifts across three employers with a zero-incident record throughout.

– Studied IT and data analytics concurrently from 2024, completing four qualifications while working full time.

English Language Teaching Practicum & Intercultural Experience Mar 2015 – Dec 2018

Teacher training programme · Argentina and Brazil

– Designed and delivered structured English lessons to Years 3–4 primary students in Argentina as part of a teacher-training practicum, the grounding for how I now explain technical analysis to non-technical audiences, then lived and worked in Brazil through 2018 across retail and hospitality before relocating to New Zealand.

Procurement Analyst: Sourcing & Cost Analytics Jan 2011 – Jan 2014

Aramark Argentina · Buenos Aires, Argentina

– Delivered 15–20% cost reductions through weekly comparative price models, while protecting continuity of supply in high-risk perishable categories.

– Ran time-sensitive procurement of perishable and short-shelf-life categories (poultry, fresh produce, dairy, bakery, chilled and frozen meats) across 150+ national suppliers, following promotion from operations supervisor.

– Produced weekly procurement reporting and dashboards for senior management, feeding national sourcing strategy and KPI tracking, and managed the full supplier lifecycle: sourcing, contract negotiation, audits and e-procurement onboarding.

Inventory & Operations Supervisor Jan 2006 – Jan 2011

Aramark Argentina · Buenos Aires, Argentina

– Led inventory and demand planning for on-site catering at a Buenos Aires K–12 school of 1,800+ students, supporting 1,000+ meals daily, forecasting weekly requirements by reconciling stock against menu cycles with the head chef.

– Held 5–7 days of perishable stock with a 3–4 day buffer per cycle, mitigating supplier shortages, delivery failures and vehicle breakdowns.

COMMUNITY

Environmental Volunteer Feb 2026 – Present

Tauranga City Council · Tauranga, New Zealand

– Take part in council-run ecological restoration across Tauranga's estuary, dune and gully reserves: native and riparian planting, invasive pest-plant removal, and bird identification field work with Envirohub BOP.

EDUCATION & CERTIFICATIONS

Level 7 Data Visualisation & Business Intelligence Micro-credential: University of Auckland, Oct–Dec 2026 (in progress)

Certificate of Proficiency: Data Analytics & Database Design (Level 6), Open Polytechnic of New Zealand, Jun 2026

New Zealand Certificate in Information Technology (Level 5): Open Polytechnic of New Zealand, Jan 2026

Google Data Analytics Professional Certificate: Coursera, Dec 2025

New Zealand Certificate in Information Technology Essentials (Level 4): Toi Ohomai Institute of Technology, Jul 2025
