

GABRIELA OLIVERA

Data Analyst · Operational & Supply Chain Analytics

Mount Maunganui, Bay of Plenty · gabriela.olivera.nz@gmail.com · NZ Permanent Resident

[linkedin.com/in/gabriela-olivera-nz](https://www.linkedin.com/in/gabriela-olivera-nz) · github.com/gabrielaoliveranz · apophenia-nz.vercel.app · terroir.streamlit.app

SUMMARY

Data analyst who builds production-grade analytics end to end — ETL pipelines, spatial and statistical modelling, and dashboards people actually use. Fourteen years in operations and procurement across horticulture, food manufacturing and logistics underpin the analysis: I have managed 150+ perishable suppliers, driven 15–20% cost reductions, and know where operational data breaks before it reaches a report. Two independent projects, both live and open-source, apply that background to Bay of Plenty kiwifruit — real government geospatial data, tested code, and limitations documented rather than hidden.

SKILLS

Languages & querying Python (pandas, geopandas), SQL, SQLite, JavaScript (ES modules)

Data engineering ETL pipeline design, star-schema and dimensional modelling, database design, data-quality validation, API integration

Analysis & modelling Statistical analysis, weighted scoring models, scenario modelling, geospatial analysis, KPI tracking and reporting

Visualisation Power BI, Streamlit, pydeck, Altair, Chart.js, Mapbox GL JS, dashboard and report design

Engineering practice Git and GitHub, pytest, GitHub Actions CI, accessibility (WCAG AA), technical documentation

Domain Supply chain and logistics, procurement analytics, operational risk, horticultural export

Languages Spanish (native), English (professional)

INDEPENDENT ANALYTICS PROJECTS

TERROIR — Geospatial Land Suitability Analysis

Jul 2026 – Present

terroir.streamlit.app · github.com/gabrielaoliveranz/horticultural-land-suitability-nz

- Built a Python ETL pipeline (geopandas, SQLite) integrating four live data sources — LINZ cadastral boundaries, S-map soils and LCDB land cover via WFS 2.0.0, and Open-Meteo climate — with centroid-in-polygon spatial joins across 22,834 parcels in four territorial authorities.
- Designed a documented weighted scoring model grounded in NZ kiwifruit agronomic research, scoring 21,491 parcels and surfacing 13,040 expansion candidates: excellent soil with no current orchard, vineyard or perennial-crop use.
- Found and fixed data-quality defects in the open, each recorded in public git history: a macron-encoding mismatch that silently excluded an entire district from the first run, and a left-inclusive binning bug that misclassified 19.4% of parcels at a tier boundary — caught because a filtered subset came out larger than its own superset.
- Hardened the pipeline with a pytest suite run in GitHub Actions CI, bounded API retries with exponential backoff and Retry-After handling, and centralised path configuration.
- Shipped a six-page Streamlit dashboard (pydeck maps, Altair charts) verified for WCAG AA contrast and colour-vision deficiency, plus a narrated HTML case study.

APOPHENIA — Operational Risk Intelligence Simulator

Mar 2026 – Present

apophenia-nz.vercel.app · github.com/gabrielaoliveranz/optimising-kiwifruit-export

- Built an interactive export-risk simulator for the NZ kiwifruit supply chain: nine operational variables recalculate risk scores, cost-of-delay and forecasts in real time, returning an executive recommendation.
- Developed a multi-variable risk model with a 26-week forecast arc and a 90-day scenario projection, validated by logistic regression against the synthetic dataset (McFadden pseudo- R^2 0.70, F1 0.91), and covered by 19 unit tests including null and corrupted-input cases.
- Integrated four live public APIs — Open-Meteo, Frankfurter (NZD/EUR, NZD/JPY), Overpass (SH2 corridor geometry) and Mapbox — each independently guarded so one failure never degrades the others.
- Modelled a star schema (fact and five dimension tables) in SQLite from a synthetic EDI dataset of 445 growers across four seasons, calibrated against public industry documents, and analysed it in SQL alongside a Power BI dashboard.
- Architected a strict configuration/engine separation so the framework ports to another supply chain — dairy, wine, seafood — by replacing one config file.

EXPERIENCE

Quality Control & Operations — Regulated Primary Industries

Mar 2019 – Sep 2025

Contract and temporary roles · Bay of Plenty and Marlborough, New Zealand

- Worked across wine production, food manufacturing, kiwifruit post-harvest, logistics and laboratory environments — Pernod Ricard (cellar hand), MPAC (box making and quality control), EastPack (forklift operations), AssureQuality, Jenkins Freshpac, Tegel, Vardaan Enterprises and Sea Gulls Guest House — building first-hand knowledge of how New Zealand primary-industry supply chains actually run.
- Carried out quality control against grade and compliance standards at production pace, in regulated environments where traceability and record accuracy are audited — the same operational measurements that drive the models in both portfolio projects.
- Operated forklifts across three employers through consecutive peak seasons with a zero-incident record, in full compliance with NZ workplace health and safety standards in high-volume packhouse and production environments.
- Studied IT and data analytics concurrently from 2024, completing four qualifications while working full time.

English Language Teaching Practicum & Intercultural Experience

Mar 2015 – Dec 2018

Teacher training programme · Argentina and Brazil

- Designed and delivered structured English lesson plans to Years 3–4 primary students in Argentina as part of a teacher-training practicum — the grounding for how I now explain technical analysis to non-technical audiences.
- Lived and worked in Brazil through 2018 across retail and hospitality, before relocating to New Zealand.

Procurement Analyst — Data-Driven Sourcing & Cost Analytics

Jan 2011 – Jan 2014

Aramark Argentina · Buenos Aires, Argentina

- Ran time-sensitive procurement of perishable and short-shelf-life categories — poultry, fresh produce, dairy, bakery, chilled and frozen meats — across 150+ national suppliers, following promotion from operations supervisor.
- Built weekly comparative price models that drove 15–20% cost reductions while protecting continuity of supply in high-risk perishable categories.
- Delivered weekly procurement reporting and dashboards to senior management, feeding national sourcing strategy and KPI tracking.
- Managed the full supplier lifecycle at category-management level: sourcing, contract negotiation, audits and e-procurement onboarding.

Inventory & Operations Supervisor

Jan 2006 – Jan 2011

Aramark Argentina · Buenos Aires, Argentina

- Led inventory and demand planning for on-site catering at a Buenos Aires K–12 school of 1,800+ students, supporting 1,000+ meals daily.
- Forecast weekly requirements by reconciling stock against menu cycles with the head chef, translating culinary planning into procurement orders.
- Held 5–7 days of perishable stock with a 3–4 day buffer per cycle, mitigating supplier shortages, delivery failures and vehicle breakdowns.

COMMUNITY

Environmental Volunteer

Feb 2026 – Present

Tauranga City Council · Tauranga, New Zealand

- Take part in council-run ecological restoration across Tauranga's estuary, dune and gully reserves — native planting, riparian planting and invasive pest-plant removal at Waikareao and Waimapu Estuaries, Papamoa and Mount dunes, and Maungawhare Gully.
- Joined the Waimapū Bird Identification and Weeding Bee for Conservation Week 2026, run with Envirohub BOP, learning native bird species identification in the field and how local habitat work links into wider ecological corridors across the city.

EDUCATION & CERTIFICATIONS

Certificate of Proficiency — Data Analytics & Database Design (Level 6) — Open Polytechnic of New Zealand, Jun 2026

New Zealand Certificate in Information Technology (Level 5) — Open Polytechnic of New Zealand, Jan 2026

Google Data Analytics Professional Certificate — Coursera, Dec 2025

New Zealand Certificate in Information Technology Essentials (Level 4) — Toi Ohomai Institute of Technology, Jul 2025
